Spring Reactive Programming
Ans: Using Mono we can return single object , using Flex we can return s
Advantages of Reactive programming
In Reactive program we can have N numbers of request that can be acce
request will not wait for database response .
Once the database process the request it will be publish the event and it
client .

For example if you query the database and will get a response with huge
it can be handled with Backpressure like accessing chunk of data .

Need to add plugin Spring Assitant

Spring Webflex
How to configure the Kubernetes that talks to each service

What are the branching strategy :

Deployment model :
Blue green deployment :
Canary deployment :

What is Side Car : Deploying the authentication along with project functi
